

Ontario Harm Reduction Distribution Program

Opioid Overdose Prevention Kits

The kits are an additional harm reduction supply item that complements the existing inventory of products already available and distributed by OHRDP.

It is recommended that each kit contain:

- **2 vials of Naloxone** (not available from OHRDP)
- **2 retractable syringes: 1cc - 25G x 1"**
- **2 amp snappers**
- **Non-latex gloves**
- **Rescue breathing barrier** (for agencies that recommend rescue breathing)
- **Client identifier card**

Each agency has the ability to customize the kit beyond what is supplied through OHRDP to ensure that the kit reflects agency and community need. The kit contents are also dependent on an agency's own policies and procedures.

The components of the kit will be shipped to the agency. It is the responsibility of agency staff to assemble the kits and ensure that agency contact information is provided to clients. It is recommended to indicate your agency's contact info on the back of the identifier card.
