

Using steel wool, also called Brillo[®], can be very dangerous. Small pieces of hot steel wool can break off and cause burns on your lips, mouth and throat. That's why you should

Always Use Screens!

Using brass screens from harm reduction programs will lower your chances of getting hurt.

Ask program staff for a guide to preparing screens.

Screens are safer than Brillo®

Pack screens into the stem. Make sure they are tight and secure - check often. When you pack the stem, be careful not to chip the glass.
